PROFILE

I'm a dedicated Full Stack Developer with 4 years of experience building robust and scalable server-side applications using Laravel and Symfony. I also bring hands-on expertise in crafting dynamic, responsive front-end interfaces with Vue.js. Passionate about clean code, performance, and continuous learning, I thrive in environments that challenge me to grow and innovate.

SKILLS

- PHP
- Laravel & Symfony
- Server Management (AWS, Digital Ocean, Google Coud)

GreeLogix
- ❖ **Associate Software Engineer** --- **Nov 2021 – Mar 2022**

The Developers Clan
- ❖ **Part time Web Developer** -- **Aug 2020 – Sep 2021**

PROJECTS

❖ **FYFER (Laravel, WordPress, Twilio)**
A fitness social media platform designed to connect individuals sharing their fitness journeys, insights, and professional tips. The app enables users to track their fitness goals and progress, and provides a feature to book trainers for both virtual and in-person training sessions.

❖ **HUK'D: Chivalry.Safety.Privacy (Laravel, Shopify, Twilio)**
This lifestyle app enables users to connect with others based on shared preferences. Users can schedule meetups by specifying the date and time, with each meetup being secured by our automated safety system.

❖ **Eagle Homes (Laravel, VUE)**
I developed the CRM for Eagle Homes, a home construction company. This CRM system manages the website and employee operations, including customer interactions and project tracking. My work streamlined business processes, enhanced user experience, and improved operational efficiency.

❖ **exIQtive (Vue JS)**
exIQtive is a business performance and organizational readiness platform that offers a comprehensive suite of tools to help organizations scale efficiently and sustainably. I worked at exIQtive as a remote engineer, collaborating with a global team of professionals from diverse technical backgrounds, I was actively involved in leading remote meetings, coordinating cross-functional efforts, and ensuring smooth communication across time zones—all while contributing directly to the platform's development and performance improvements.

❖ **Selena Travels (Symfony, Twig)**
Selena Travels provides comprehensive support for customers throughout their entire Mongolia trip, ensuring assistance from the moment they arrive until they depart. Features include real-time customer support, detailed travel itineraries, and seamless booking management, enhancing the overall customer experience and operational efficiency of the agency.

❖ **AxleBusters (Symfony, Twig, IMAP, VUE)**
AxleBusters, an innovative website catering to automotive enthusiasts. Users can participate in giveaways by buying stickers. Following the completion of each giveaway, admin employs a meticulous process to select the winners who will be rewarded with the coveted prizes. I had implemented IMAP to open inbox and read email payments as payments were managed by emails and every email had a unique code.

❖ **My Tutor Source (Laravel, Message Bird)**
At MyTutorSource.com, a leading online platform connecting students with tutors, I developed a robust chat system. This system featured encryption for phones and emails, ensuring secure communication. I also integrated alerts for potential security breaches and used Message Bird's APIs to incorporate WhatsApp Business, enabling seamless communication between tutors and students.
